I'm not sure if this is an XScreenSaver, Gnome, or Rdesktop problem or what but I'm running a fully patched version of Fedora 2.

If I make an desktop connection to a Windows XP box fire up Word and any document, then lock the Fedora Gnome desktop, type my password into the XscreenSaver dialog window to unlock Gnome my password shows up in plain text within Word in the rdesktop connection!!!! I dont even know how to go about diagnosing this problem!

This is the Fedora app versions but its all out of the box stuff.

rdesktop-1.3.1-3
xscreensaver-4.14-5
kernel-2.6.6-1.435

Here is the Windows Stuff:

Windows XP SP 1 with all patches
MS Word (XP) 2002 SP3
