Look, im not a techie and I need to know whethere something is possible or not. First I will give some detail on the system concerned then I will ask a question in regard to that system.Thanks.Bear in mind this is a big Public Organisations system Im talking about.

About System:

The XXXXXXXX software environment is based on the Microsoft Windows NT Workstation network operating system and Microsoft Office applications for the desktops, and Microsoft Windows NT and Microsoft Back Office suite for the servers. The department's custom-built applications run inside the Microsoft Internet Explorer browser, which is driven by a Microsoft IIS Server on the back end. The department also uses Oracle and Microsoft SQL Server 7.0 as the corporate databases, and continues to connect to legacy systems to handle certain dedicated functions.

The XXXXXXXX network encompasses a head office station, six 24-hour other offices, and more than 20 area offices as well as mobile units. In addition to a team of Compaq ProSigniaTM and ProLiantTM servers used for messaging, printing and data warehouse functions, the department also chose to standardize on Compaq DeskProTM 2000 PCs. These PCs offer "Best In Class" desktop management functionality through innovative features such as Compaq Intelligent Manageability.

Compaq ProLiantTM 7000 servers

min. 3x4.3 GB hard drive with RAID 1, RAID 5 and integrated backup

Dual 200 MHz Intel Pentium Pro processors

1GB RAM

Compaq ProLiantTM 2500 and ProSigniaTM 850R servers

3X4.3 GB and 4X4.3 GB

Dual 200 MHz Pentium Pro processors

128 MB and 512 MB RAM

Compaq Insight Manager

Compaq DeskProTM PCs

32 MB RAM

comp.os.ms-windows.nt.admin.security: Urgent: Problem associated with NT.Advice required please

2.1 GB HDD
P200 MMX processor
Compaq Intelligent Manageability
Compaq Insight Manager
Microsoft Back Office
Microsoft SQL Server
Microsoft IIS Server,
SMS Server
Microsoft Exchange Server

Question: bearing in mind this system is accessed by hundreds of persons every day.Would it be possible for someone to delete the Population Monitor List (i.e. the list of all persons entitled to access etc) and that not to be discovered for 3 months ?. I.e. they had no record of who accessed the system or for what for 3 months ?? Possible ,or fiction ?

Thanks
Andy
