Hi

I know that but what I meant when I said 'recover from this' is that ZA actually makes a backup of the rules database while it's running. If it fails for any reason or the system is re-booted it's supposed to get a copy of the rules db from it's backup. Obviously that didn't happen in this case hence my suggestion to let ZA create a new rules db. Knowing the problems a corrupt db can cause I suggested creating the rules db because I believe it may cause more problems just trying to recover an 'old' db.

Regards

Bill
