With IE 6 I had the similar problem, in conjunction with zone alarm. When I allowed in Zone Alarm the internet access for the Generic host process for Win32 Services, IE 6 worked well again and all problems were settled.

BTW I use Windows XP Pro und have the XP fire wall switched on too. But this firewall doesn't stop outgoing traffic, so I think, an additional firewall like ZA is necessary. But I found out, that with the XP firewall active, my ZA firewall has less to do than before.
