Has anyone else experienced this problem with using Sygate Personal Firewall Pro build 1117 and Windows XP?

If you log off one user, and log in another SMC.EXE suddenly utilizes all of your CPU, so bad that your mouse slows down and you have to kill the process. I experience this EVERY time during a log off and log back in as another user. This is not a switch user problem either. I'm talking about a normal log off, log in.

Anyone else at all?

Thnx!
