Reconfigure your browser to "save to disk" on the flash file extension .swf and the browser will save the file to disk when it encounters it....or give you a choice to save to disk or run it.

Do yourself a great favor and UNINSTALL all Shockwave software, like Flash! Vicious webpages are running bad things with Flash to attack your system....firewall FUDware or no firewall FUDware.

Go see:

<http://online.securityfocus.com/search>

Enter Flash into the search engine. There's way too many replies to post here....
