

McAfee Firewall 3.0, also Netscape 7.0

Hi all,

Two questions:

1) I have McAfee Firewall 3.0 installed on my system. Up until yesterday, it worked great, no problems. However, for reasons I won't get into, I needed to uninstall and then reinstall it. Once I did that, all of a sudden any program that needs to access the internet can't get through; it is blocked, even though I have set up these programs to have full, unfiltered access (this worked before yesterday). Not only that, but it doesn't pop up a window notifying me that a program is trying to do something it shouldn't; it just suppresses it entirely (I get timeouts or hostname not found type errors). Anyone know how I can fix this?

2) This isn't the scope of this ng, but if you know anything about it, please help me:
Netscape 7.0, which I recently upgraded to (about a month or so ago), shuts itself down when I click on certain websites, or try to run java-type applications such as instant messaging. (For an example of a site I can't open, try <http://www.pickeringpentecostal.com>, my former _church_'s website). It doesn't pop up any windows or anything; just any Netscape window I have closes. I even tried with IE 5.5, and the _same_ thing happens! So I don't know if the problem is with Netscape or with something on my PC...anyone know why this could be happening??

Thanks for any help you can give me.

Peter
