Hello,

First, Sorry for my poor english, i don't use this manguage usually :-)

I want to setup un linux box as router and firewall.

I plan to use zebra routing deamon and netfilter.

Zebra use spécial method to setup interfaces.

Is there a problem with netfilter to protect interfaces after routing startup ?

The linux kernel assume 802.1q vlan configuration.

Do you know if Zebra support this kind of interfaces ?

The goal is to provide to my network a firewall wich is able to assume one dmz in a vlan

and talk bgp with internet operators routers.

Thank you for every help you can provide me :-)

Best regards,
