this is how i was able to setup ICS with ZoneAlarm running on a winXP host
and a win2k PC as the client...

give the host a static IP of 192.168.0.1 w/default subnet mask

then goto ZA advanced menu and set the option 'this computer is an ICS
gateway' (or something like that)

then goto the client PC and under TCP/IP select 'obtain an IP automatically'

then goto ZA on the client, advanced section, select the 'use gateway...'
option

i think this is right however its from memory...

i have had to uninstall ZA off my client since I installed SP2 or it freezes
my PC up when using certain programs !?!?

good luck,
AP
