I need to set the Firewall settings in my Draytek Router to block access to (and from?) Messenger.

I've done a search here, and a Google search, but seem to find mixed answers, many of which contradict each other...

Some list various Ports to block, but then Messenger appears to use Port 80 which is needed for other things.

Some list IP Addresses, but the lists vary, and there appear to be new addresses getting added regularly.

One post suggested blocking access to <https://login.passport.com>, but I dont understand how to do that on my router without knowing an IP address.

Any help would be much appreciated, especially if you can relate what I need to do to the Draytek Firewall parameters.

TIA,

JohnK
