Thats a great forum, thanks for the link. I learned alot from that site and decided to make a go for it, i created a virtual port and everything following what others had done, but it is still not working. I wanted to post my config file there, but I can't seem to register there (it errors out). I might be blind, but I couldn't find an e-mail to contact an admin to see what the deal is.

Thanks for your help,

NZ
