hi,

how do i do it in w2k group policy ? we dun have a proxy server. are there any steps that i can refer to ?

so d u mean checkpoint fp3 does not have the capability to block messenger ?

regards.

Hi,

You do have Smartdefence in FP3 but in it's very first form , with no P2P or Messaging blocking.

the only way is to block the messenger ports but it won't help you alot because messenger works on port 80/HTTP and you can't block that .

In the new release (R61) you have the means to block messenger and other messaging apps via HTTP , so you'll have to upgrade.

if you want to block it via w2k groups then use proxy or check point Smartdirectory
