Hello,

I'm not sure this is the right group – if not please let me know.

I'm working on a paper about OpenSource and Security (trying to narrow it down). Right now I'm looking for some information. My questions are:

1. When developing OpenSource Software (OSS) is any standard concerning security advised to be followed ?
2. I need some examples of OSS that has been certified according to any known security standard (ISO, BS etc)

If you have answers or comments to my questions I would be very pleased.

Thanks in advance

regards
Frank Døssing
