I am looking for a 'Sandbox'–security application for windows NT/2000..

Something like Tiny Personal Firewall (v4 and up I think), but not that complicated. And NOT like Surfinguard which is not configurable.

With an easy 'learning' capability (like some firewalls as Mcafee and Norton do have). With full control over all the resource accesses like files, directories, devices, memory, services etc.

Does anyone know of a good 'sandbox' application?
