:(besides the commercially available)?!

Do you want to encrypt the source, or do you want to obfuscate it?  
Encrypted html isn't decodable by browsers. Perhaps you are interested  
instead in some kind of encryption for java or javascript so that  
when people look at the page source, they have a hard time figuring  
out how it works?

Is "meme" descriptive or perscriptive? Does the knowledge that  
memes exist not subtly encourage the creation of more memes?
