The only way i can get MSN Messenger audio to work via my Draytek 2600, is to turn on uPNP services in WinXP

AIUI, uPnP is not such a good idea to have switched on? Being on ADSL, i have a fixed IP, if that is relevant to my concerns.

I am firewalled up to the eyeballs, insofar as i have my hardware firewall (aka NAT router) and also run software firewalls on the local network machines.

I use MSN Messenger a lot to communicate with family abroad, and not having audio is a nuisance.

Should i accept the situation, and have no audio, or could i 'cautiously' turn uPnP services on?
