In article <z5j3hLovEHA.2704@server1.thedragon.hopto.org>, plandregan@gmail.com, a.k.a TheDragon says...

- > *Navigate to the router config page, by default it will be <http://192.168.1.1>*
- > *on the right hand side you will see an entry Syslog. In there enter the IP*
- > *address of the machine running the syslog software. Simple as that.*

Thanks i've done it before, but had a total brain fart outage this time and couldn't remember how to do it!
