This is what I would like to do:

Send a file through email so only that person can read it. I want to prevent him from sending it to anyone. For his eyes only.

Is there an encryption program that can do that? I don't want a password or anything like that. I want the receiver to not have to do anything, but make it so if he forwards the email to someone else they are not able to read it.

The file that I am sending through email is .doc. I was think of sending PDF's though.

A quick Google search brought up <http://www.bigstring.com/mail/main.php>, among others.
