.....

Thank you,you seemed to be a easygoing person.But forgive me (and anyone same as me),your software really be beauty,then the worl use all,and many one (who don't want be behind of the time then they) buy the unoficial CD,if for the official CD,i'm afraid it must be 10,20 years after now,we then have money buy ur nowly CD (but at that time,i'm sure that nowly CD old all,..),and in that way,i will never have enought money buy gold product.Ok,leave the future,help us improve the economic now then the future we will have money buy yours.He he.I think the fault is in your abit,why you creat so good and famous thing,and advertise it so large,then we know it???Hi hi,hope that you feel be better.

Ok,leave it,thanks for your friendship but you will be able to change my decision.I decide use thing (which other using) for study and when be able make money ,i will be able buy everything.Never think that we dont want have gold CD,we want much but now stop there (gold CD for gold men and the worse for non-trading men)

One of the best advantages of using the FREE `_open_source_` software is that YOU can study the code and even join in writing the code and fixing problems with the software.

That way, YOU can REALLY learn about computers, from the ground up.

Once you have a 'bullet proof' system running, you can use a virtual machine emulator program, virtualPC, available FREE from microsoft, WITH operating system pre-installed and legal.

You can then do your testing on a LEGAL and bullet proof system.

Again, I wish you good luck.

Re: Help me,my computer maybe at risk with some trojan.

Re: Help me,my computer maybe at risk with some trojan.

I had some very good computer science grad students work for me, over the years, some from your country, so I have no problem with where you live.
