No problem. <http://www.cygwin.org/> and the mirror listed there,  
<ftp://mirrors.rcn.net/mirrors/sources.redhat.com/cygwin/> are pretty good.

Did you select the OpenSSH package when you did the CygWin installation? And  
it doesn't add source code unless you ask it to. You don't \*need\* source  
code, you just need the package, right? And the libraries to run it with?
