I have successfully setup port forwarding using PuTTY under Windows 2000, and am able to telnet to SMTP and POP ports without a problem. However Outlook 2000 times out and generates an error when I try retrieving/sending email through it. I've tried using both localhost and 127.0.0.1 as the host name; port numbers tried were 11110/3110 and 11125/3025.

Any recommendations? I will also want to use Norton AntiVirus's email scanning with this set-up (but will be happy to just get it going without it).

Thx.
