Mandrake 8.2 (2.4.18-12mdk), SSH server is OpenSSH_3.2.2p1, and it happens with all the ssh clients I've used, SecureCRT 3.4.1 by VanDyke, and PuTTY version 0.52. I'm not sure how to go about tracing this problem from either side, it seems to happen randomly. If I wanted to cause it to happen, I could go into a directory with alot of entries and run an `ls -lsa`, that generally causes it.
