Hi *,

I'm pleased to announce the second beta release of my PuTTY SSH client port to the Nokia 9200 communicator series. Like the original PuTTY for Win32, this version is also free and available with full source code.

The software, along with some documentation, is available at <http://www.s2.org/putty/>

Please read README.txt from the distribution before installing!

The port is tested on the original 9210 as well as 9210i, and I don't see why it shouldn't work on the 9290 as well. Before anyone asks, 9110 is not supported, since it is based on GEOS, not Symbian OS.

Feedback, bug reports, and success stories are welcome. I can't promise I'll have time to answer all e-mail, but I'll certainly read it all.

Happy holidays.

Petteri
