|Subject: rsync + ssh + rbash

|

|Hi, I am trying to connect a user with rsync + ssh

|

|it works fine when the user has a /bin/bash shell

|

|but I would like to restrict the shell to its home, so I tried the
|following rbash shell

|

|#!/bin/bash

|/bin/bash --restricted

|

The correct way to do this, is creating a /bin/rbash symlink to /bin/bash
and setting that, /bin/rbash, as the users' shell.
