Yes, you can tell us what platform, version and compile options you're using.

If, for example, you're using AIX 5.x *and* your sshd was compiled on 4.x then the wtmp structures are incompatible and you'll see this problem.

If that's the case, get an sshd compiled on 5.x. If that's not the case then please provide more details.

Good judgement comes with experience. Unfortunately, the experience usually comes from bad judgement.
