Hi there,

This happens to me quite often. When you open a SSH2 connection to a host, and then open a Microsoft VPN (MS-CHAP2) connection, the SSH2 connection will not respond anymore.

Does anybody know if this is fixed in 0.53b? Is this a problem with Putty, or with Microsoft or Microsoft TCP/IP stack.

Workaround is of course to first close all Putty session, and then create the VPN connection and log back in.

Tested with Microsoft XP (all recent patches applied).

Pieter
