hello List,

I'm looking to implement ssh on our servers (40 solaris boxes)

Due to architectural reasons I'm currently unable to put my ssh identity keys in \$HOME/.ssh – \$HOME is a directory that is rdisted over several servers.

I want to put the keys in \$HC/.ssh, which is a different path on each server. Unfortunately, doesn't seem to understand shell variables, because this fails;

Host \*

IdentityFile \$HC/.ssh/identity

Any ideas on what I can try?

Thanks.

Jan

That, that is, is.
That, that is not, is not.
That, that is, is not that, that is not.
That, that is not, is not that, that is.
