NWR> I think you can put the ssh command in quotes, thus allowing

NWR> command line options. But it might be easier to put a shell

NWR> script wrapper around ssh, with the wrapper supplying the port

NWR> number option.

No need for anything this awkward; just specify the port in the client config file, or use `-o`. E.g. for OpenSSH:

```
% scp -o port=1234 ...
```

-- OR --

```
[~/ssh/config]
```

```
host foo
```

```
port 1234
```

```
% scp foo:bar baz
```

--
