```
make[1]: Nothing to be done for `all'.
make[1]: Leaving directory `/tmp/openssh-3.7.1p2/openbsd-compat'
gcc -g -O2 -Wall -Wpointer-arith -Wno-uninitialized -I. -I.
-DSSHDIR="/etc/ssh" -D_PATH_SSH_PROGRAM="/usr/bin/ssh" -
Everyone
```

greetings.... i am in desperate need of some assistance. In trying to update my openssh to openssh-3.7.1p2 i receive the following error during the "make"

```
D_PATH_SSH_ASKPASS_DEFAULT="/usr/libexec/ssh-askpass"
-D_PATH_SFTP_SERVER="/usr/libexec/sftp-server"
-D_PATH_SSH_KEY_SIGN="/usr/libexec/ssh-keysign"
-D_PATH_SSH_PIDDIR="/var/run"
-D_PATH_PRIVSEP_CHROOT_DIR="/var/empty"
-DSSH_RAND_HELPER="/usr/libexec/ssh-rand-helper" -DHAVE_CONFIG_H -c
cipher-ctr.c
cipher-ctr.c: In function `ssh_aes_ctr':
cipher-ctr.c:72: warning: assignment from incompatible pointer type
cipher-ctr.c: In function `ssh_aes_ctr_init':

cipher-ctr.c:140: warning: assignment from incompatible pointer type
cipher-ctr.c:141: warning: assignment from incompatible pointer type
make: *** [cipher-ctr.o] Error 1
```

I successfully compiled and installed zlib-1.1.4 and openssl-0.9.7b previous to the compile of Openssh. This is a Redhat 6.2 server also

anyone come across this error in the past? Any help will be greatly appreciated
