

comp.security.ssh: is it impossible to tunnel ftp?

is it impossible to tunnel ftp?

hi

i have a firewall, iptables on linux redhat 9.

behind it i have one ftp server(windows) and one webserver (windows).

i have tried to make a SSH-tunnel to the ftp-server, tried both with putty on windows and with ssh on a FreeBSD like this:

```
ssh -L 2121:ftp.server.ipnum:21 sshhostipnum
```

the problem seems to be ftp-data, login works just fine, but when i print "ls" or anything else i get "500 Invalid PORT Command "

it works from the ssh-shell to the ftp server.

what am i doing wrong?

thanks
