

cvs servering error message

Source: <http://www.derkeiler.com/Newsgroups/comp.security.ssh/2003-12/0212.html>

When using cvsnt and putty to do cvs over ssh on Windoze I get the following warning message on checkout (though the checkout itself is successful):

```
cvs -Q -z 9 co -P zlib
' from cvs servering: unrecognized response `
cvs checkout: warning: unrecognized response
`C:\andrew\work\trunk\latest>
"c:\Program Files\Putty\plink" -1 -l amarlow -i "c:\.ssh\identity" -l
"
' from cvs servervs server
```

This sets the exit status to error. My build script checks for a bad exit status and if set assumes something terrible has gone wrong. So this warning is causing a problem for me. For the time being I can disable the check but it would be good if the reason for this warning could be found. Has anyone else seen this? Any ideas what the cause is please?

Regards,

Andrew M.
