> files with all completely different file names)*

`pscp -r sessionprofile:/path c:\local\path`  
to get all dirs/files recursively  
or

`pscp sessionprofile:/path/* c:\local\path`  
to get all files under path

assuming, that you have created a session profile with putty before  
and added the identity with pageant.

Otherwise try

`pscp -i c:\local\path\id.ppk [-P remoteport] user@host:/path/*`  
`c:\local\path`  
for example.
