Hi everybody,

I want use webmin to manage my server. The first usage was very good in secure mode (https). I have changed theme and webmin crashed. So I use it without ssh (http) and changed theme. Problem to connect in https with number 12263 error message.

So I succed to change theme but it cant connect in https mode. It search, search and search... Timeout !

In http mode all is good. What can I do ?

Thanx
