Hi All,

What does it mean to connect to a server through FTP over SSH2 and using port 21? Is that port forwarding?

By the way, that server does not accept sftp or scp, it accepts regular FTP clients on port 21 and FTP over SSH2 clients on port 21 as well. And the only client that I know work with it is SecureFx
<<http://www.vandyke.com/products/securefx>>.

Thanks in advance!
