So I am trying to copy files from my Linksys WRT54G Router, running a EWRT Linux written by the folks at www.portless.net. When I try to copy from the router, this is what I get:

```
C:\Documents and Settings\Administrator\Desktop>pscp -r -unsafe -l root
192.168.
1.1:/opt/htdocs htdocs
root@192.168.1.1's password:
warning: remote host sent a compound pathname 'c:'
        renaming local file to "
security violation: remote host attempted to write to a '.' or '..'
path!
```

and all that happens is that it creates the "htdocs" directory, and doesn't copy individual files. I can copy individual files, but just not the whole directory and subfolders. Any help would be greatly appreciated
