

Cannot disconnect using PuTTY's psftp.exe

I have made my connection successfully, and I can do anything in the program (in the command line) that it claims to be able to do – except disconnect. That includes using quit, exit, and close. It simply hangs without any output. It closes when I break the program or close the prompt, but I am not sure if, at that point, it gracefully disconnects from the server (and I don't know if I can determine if it has). Any help someone could offer would be much appreciated. Thanks.
