Does any one here how to copy files from Linux to Windows skipping the password?? I have found several pages which describe the method like

<http://mah.everybody.org/docs/ssh>

i.e

HostA->Linux environment

HostB->Win environment

I follow step by step the description but when I want to add my keys in my HostA it says

Failed to connect to authentication agent – agent not running?

all of this is due I wanna input that scp copy in a crontab job

thanks guys

.
