

Question on NetCat and Port Forwarding

Source: <http://www.derkeiler.com/Newsgroups/comp.security.unix/2004-06/0005.html>

I want to set up a port forward, so that port 1000 is forwarded (via 'server') to port 2000 on 'mycomputer'. If 'server' was running sshd, I would use the command

```
ssh server -L 1000:mycomputer:2000
```

However, server does not have sshd installed. Is it possible to achieve this requirement by running netcat on server at user-level ?

If so, how would this be achieved ?

Regards

Patrick
