Vivek,

Glad to hear the article helped.

Actually processing cards is a whole different ball game :) There are so many options to choose, you can either go with something like Worldpay or PayPal which allows you to use a regular bank account and bill people. Alternatively you'll need to look into setting up a merchant account with your bank and using a processing gateway.

In the US I believe that Verisign offer such a service, but I don't know of any others. In the UK I've been looking at implementing something to use DataCash from .NET natively. I can't really offer any further assistance since I don't know of many payment gateways, but you'll be able to find them via. Google or Yahoo!.

Regards,
Paul
