Hi All,

I am using FormsAuthentication. It works great with one exception, when a user logs out i say formsauthentication.SignOut and redirect to login page.

Now if i click on browser back button previous secured page is displayed.

i tried following work arounds but none work

1. access the histor list, its is secured so no access priviledges are availabe
- 2.

Response.Cache.SetCacheability(HttpCacheability.NoCache); does not work when written just before formsauthentication.SignOut.

please help ASAP

regards

sj.
