Hello everybody:

When compiling a small ASP.NET Program I get the above mentioned msg.

The error msg said that my user name is not in the Debugger Users group. It is, and besides that, I have administrator rights. I checked everything what an article in MSDN suggested. Everything OK. I use a W2000 Pro system within a small peer-to-peer network. When I log off from my UserName and logon to "Administrator" everything works fine. So I can live with that but it still is a bit embarrassing. Any idea what little thing I could have overseen? Thanks a lot.
