Bassel,

Here is the error that is dumped, there is no stack trace.

Mike

Configuration Error

Description: An error occurred during the processing of a configuration file required to service this request.

Please review the specific error details below and modify your configuration file appropriately.

Parser Error Message: An error occurred while parsing EntityName. Line 353, position 277.

Source Error:

Line 351: worker process for the desired application

Line 352: -->

```
Line 353: <processModel enable="true"
timeout="Infinite" idleTimeout="Infinite"
shutdownTimeout="0:00:05" requestLimit="Infinite"
requestQueueLimit="5000" restartQueueLimit="10"
memoryLimit="60" webGarden="false" cpuMask="0xffffffff"
userName="DEV\NETGlobalUser" password="MyPassword"
logLevel="Errors" clientConnectedCheck="0:00:05"
comAuthenticationLevel="Connect"
comImpersonationLevel="Impersonate"
responseRestartDeadlockInterval="Infinite"
responseDeadlockInterval="Infinite" maxWorkerThreads="25"
maxIoThreads="25"/>
```

RE: Config error using domain user for ASP.NET worker process

microsoft.public.dotnet.framework.aspnet.security: RE: Config error using domain user for ASP.NET worker process

>/ I am attempting to configure an Active Directory domain
>/ account that will be used for the ASP.NET worker process
>/ instead of local MACHINE or SYSTEM. I have followed all
>/ of the MSDN articles for creating the user, setting all
>/ of the required ACL's on various folders, setting the
>/ local security policy attributes, etc.
>/
>/ I have modified my Machine.Config's <processModel>
>/ section to include the new user credentials such as:
>/ userName="MyActiveDirectoryDomain\MyUser"
>/ password="MyPassword"
>/
>/ However, when I hit my site...the .NET runtime throws
>/ a "Configuration Error" and indicates that an error
>/ occurred while parsing EntityName on the
<processModel>
>/ line. It appears that the .NET runtime can't even
parse
>/ the config file correctly with the Domain\User
syntax.
>/ At least a rights issue would have resulted in an
invalid
>/ username/password error or does not have required
rights,
>/ etc. It doesn't even get that far...
>/
>/ I have combed through every white paper, web article,
>/ etc. and can't seem to find anything related to this
>/ specific error or how to solve it...
>/
>/ Thanks,
>/ Mike
>/
>/
>
>.
