Hi there:

1. If I use firewall, I cannot open new or existing ASP.Net application. I have set firewall to allow IIS, but this has no effect. Only when I close the firewall, the ASP.Net application can be open.

I would like to know, which application should I allow it run while still keep firewall working?

2. I can creat new ASP.Nete project in the default location but cannot creat a new ASP.Net project in a specified location. The OK button is simply disabled. I have created a virtual directory pointed to the specified location, but this does not work.

Any help?

CM
