Hello John,

You can add a login to SQL Server for that NT AUTHORITY\NETWORK SERVICE account, which I believe you'll find in the local group IIS\_WPG. You can do this in SQL Server Enterprise Manager under Security\Logins. Make sure also to give it the required database access and permissions

Please let me know if this works for you.

Thanks,

Bassel Tabbara

| Hello,

microsoft.public.dotnet.framework.aspnet.security: RE: Asp.Net "login failed for user 'NT Authority/Network service'"

|  
| My SQL Server 2000 is on the same machine as IIS 6 on a Windows 2003  
| Server.

| I've added the ASPNET user to SQL Server, and have given it db\_owner  
| rights

| to the database. I'm using integrated security SSPI. I'm getting the  
| above

| error message when I try to connect to SQL Server to authenticate the  
| user.

|  
| I've already installed this on a Windows 2000 Server with IIS 5. I don't  
| know if I've missed a step or if there is something different in Windows  
| 2003 Server/IIS 6? Any help would be greatly appreciated.

|  
| Thanks, John  
|
