Hi

We had installed .net framework version 1.0.3705.
Now we updated to .net framework version 1.1.4322
for solving the link button SSL security alert in datagrid
control.
the security alert issue is solved now.

Now we are facing the problem of
'System.ArgumentException: Redirect URI cannot contain
newline characters.'
when trying to pass the Exception error message as
querystring using the
Response.redirect method to a customized error page.

It seems the Exception.message property now returns
the 'Parameter Name:' along with the error message.
The 'Parameter name' value is concatenated to the message
with a newline character.

Can u please help us to fix this issue?
Advanced thanks with,
Ramesh.N
