I have some code where I send some email. If I send an email to an internal recipient, it works great. If I tend to send to someone outside our organization I get "The server response was: 550 5.7.1 Unable to relay for chrisworking@yahoo.com". If I turn off Anonymous Authentication on my SMTP Exchange 2000 server I get another error, "The server response was: 454 5.7.3 Client was not authenticated".

I need a way to pass logon information with the following code (Any ideas would be greatly appreciated!):

```
Imports System.Web.Mail
```

```
'time to send email now
Dim message As New MailMessage()
With message
.BodyFormat = MailFormat.Html
.To = RecipientList
.Cc = MessageFrom
.Subject = MessageSubject
.From = MessageFrom
.Body = MessageBody
End With
SmtpMail.SmtpServer = "MyEmailServer.MyDomain.com"
SmtpMail.Send(message)
```

Thanks again for any help!
