Open Project from web (when trying to open from localhost), IDE stops responding?? VS /NET!!!

I have few ASP.Net (dotnet) projects [web projects] on my localhost. I am able to go to c:\interpub\wwwroot\ProjName\MyPrj.sln and work with my project, but when I try browsing to open it from the VS IDE menu: File -> Open -> Project From Web, then one of my projects was missing (I mean not showing in the open file dialog box that opens exploring the "localhost"), I am a newbie with web development and with IIS, so I was playing with the security properties of the IIS, and it got worse. Now whenever I am trying to Open from web the browsing animation plays for ever until I stop it and then the VS IDE Stops Responding and needs to be closed.

Could be that I am missing some basic knowledge of how to deal with IIS.

My machine is running XP OS, and I am my station administrator.

Any Idea or any help will be very appreciated.

Regards

Efy.
