Hi,

I have a problem. I want to activate the impersonate in ASP.NET, but when I change impersonate to true, I got an unspecified error in all Oledb connections.

I checked the TEMP variables, the permissions, and I have no idea why this problem is happening.

If I change the processModel to run as SYSTEM, the impersonate works, but the IIS crash in five or ten minutes.

I have many websites hosted in this webserver, and I need your help to solve this problem.

Thank you very much

Marcelo Coelho
