I am using forms auth. against a sql db. I am using a role membership to control access to the various pages in the application. I have created a cookie to the client with the users info and works great. I am not sure how to deny access based on the role the user is in. I have the role ID to base it on, but I dont want them to even be able to see the form I want them to get redirected or just close the page.

TIA,

Steve Wofford
