This morning I come into work, the boss asks me to fix a problem, I say sure, fire up my laptop, run the app to start tracing the error and bam. Server Unavailable. What? Checked the event log:

Logon Failure:

Reason: The specified account's password has expired

User Name: ASPNET

Domain: DELLWING

Logon Type: 3

Logon Process: Advapi

Authentication Package: Negotiate

Workstation Name: DELLWING

How does an auto-generated password expire? And how on earth do I make it generate a new one? Any ideas?

Trent.
